

# INVESTIGATING MY SPOTIFY LIBRARY

SEEKING USER STORY INSIGHTS IN MY SAVE HISTORY  
JACQ HORIZON

# DATA OVERVIEW

- Used Spotify Web API to get last 500 saved songs, spanning April 27th, 2024 to March 3rd, 2025 (311 days)
- Half of the days I saved 0 songs

317

ARTISTS

441

ALBUMS

2

AVERAGE SAVES PER DAY

18

MAX SAVES IN A DAY

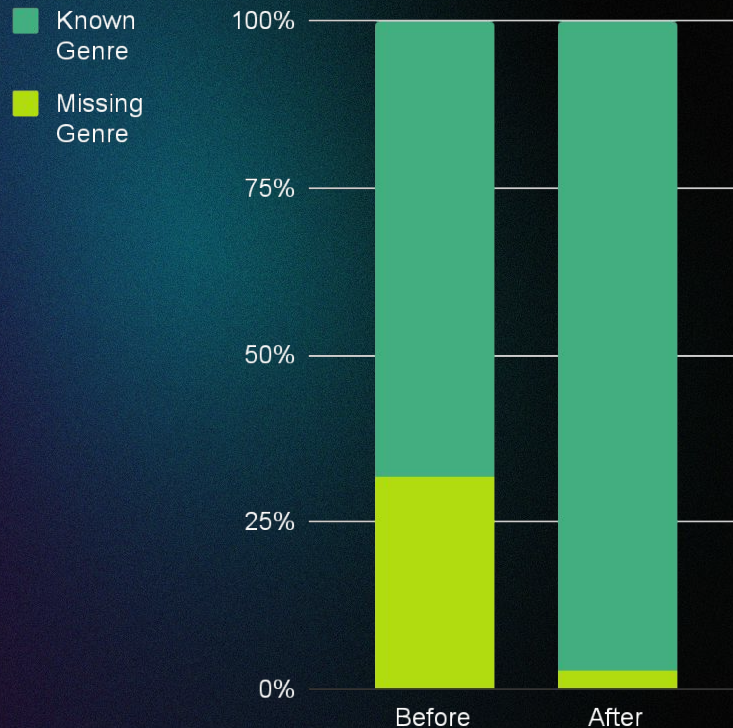

# DATA LIMITATIONS

## GENRES

- 31.86% of genre data was missing
- Used LastFM API to fill missing genres
- However, LastFM's genre data was hyper-specific and frequently inaccurate due to user input
- Resulted in a lot of manual data cleaning and ultimately not very useful genre data

## UNAVAILABLE DATA

- Listening history
- Source of save (Search, playlist, etc)

# USING MY SPOTIFY LIBRARY DATA, WHAT ATTRIBUTES DEFINE MY USER STORY?

## DATE

Which day of the week do I save the most songs?  
Are there months or weeks where I am more actively discovering new music or is it consistent?

## TIME

What time of day do I save the most songs?  
Are there different patterns of time of day depending on the day of the week?

## RELEASE YEAR

Do I have a preference for recently released music?  
Do I usually save new music soon after it is released?

## GENRES

Despite the genre data being widely varied, are there any patterns in genre?  
Does genre correlate with any other attributes?

# DAY OF THE WEEK

- Most saves: Wednesdays 10am
- Mid week slump
- Notable dip: Tuesday and Wednesday 6pm to 8pm
- Class hours
- Only one song saved outside of 5am to 11pm (cropped from graph)
- Consistent sleep schedule

## MONDAY

38 saves

## TUESDAY

66 saves

## WEDNESDAY

100 saves

## THURSDAY

79 saves

## FRIDAY

81 saves

## SATURDAY

69 saves

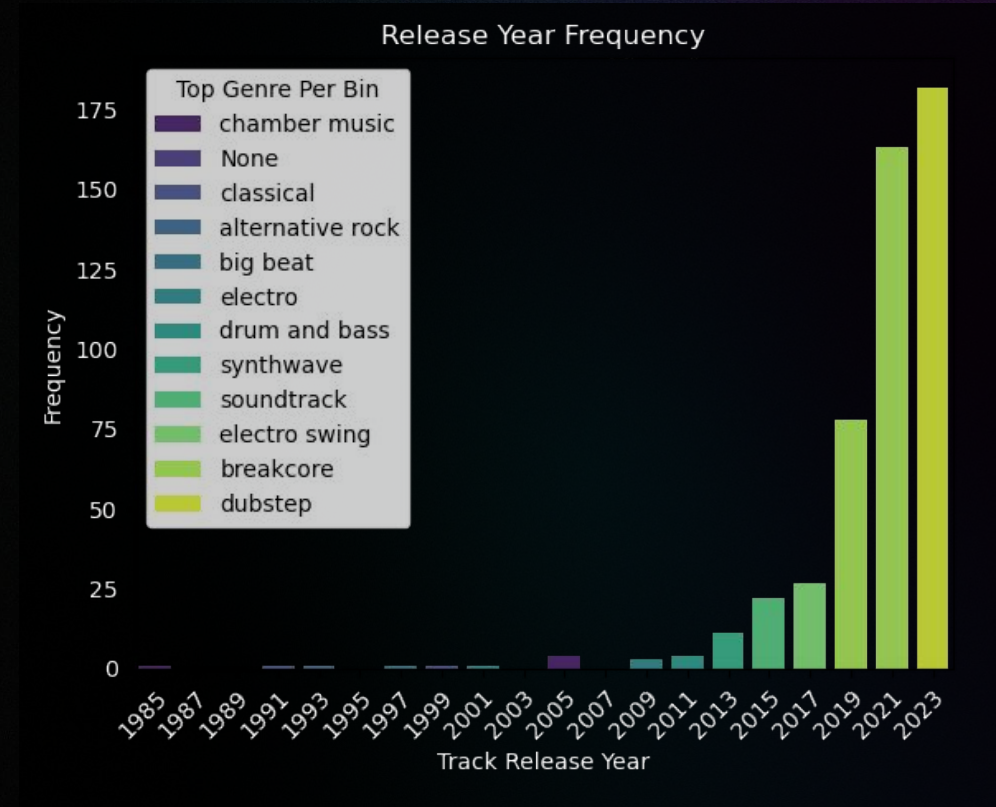

## SUNDAY

Hour of Day

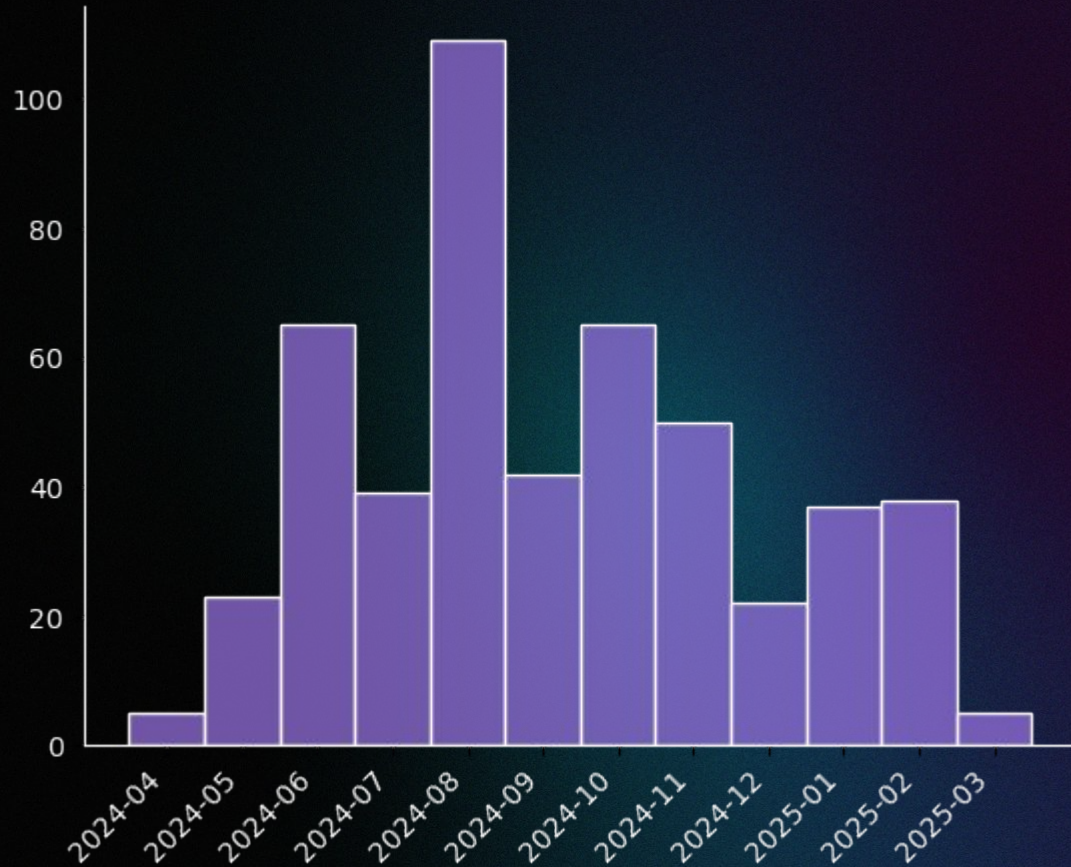

## RELEASE YEAR

- Majority of songs (84.6%) were released in the last 5 years
- Left skew may be a result of the data set time frame (April 27th, 2024 to March 3rd, 2025)
- Outlier songs in the 80s and 90s are mostly orchestral music or music I heard on the radio

## MONTH

- Top month: August with 109 saves
- Follow by October and June with 65 songs each
- Peak in summer: listening through albums before seeing an artist live or discovering new music on road trips
- Dip in winter: busy with school

# TAKEAWAYS

## THINGS I WOULD DO DIFFERENTLY

- Plan more structure before exploratory data analysis
- Organize notebook differently

## NEXT STEPS

- Use existing analysis to create future predictions
- Pull data from other people's libraries to compare trends
- Pull larger range of data to compare year over year
- Research other sources of music related data, especially for genres
